

Church360 — Scope & Product Details

Document: Scope details (Church vs Welfare, module-by-module)

Version: Draft

Platform overview

Church360 is one platform with **one shared backend** and **two complementary experiences**:

Experience	Role in the church	Focus
Main church (Church frontend)	The whole congregation and general church operations	Information, worship life, structure, and broad data collection — who we are, where we meet, what we publish (sermons, events, announcements), and how the church is organised.
Welfare (Welfare frontend)	A grouping inside the church — like an umbrella ministry within the same body	Collections and welfare-specific stewardship: families, monthly and annual giving, payments, welfare notices, and reporting that ties money to members and households.

Both apps use the **same identity, users, and core data** where it overlaps. Welfare does not replace the main church; it **specialises** a slice of church life (especially **money in** and **household-level membership** for the welfare) while the main church carries **church-wide** communication and operations.

How it fits together

- **Main church** = public-facing and admin-facing **general church** work: districts, sermons, calendar, announcements, settings, and user records as the wider organisation sees them.
- **Welfare** = the **welfare ministry's workspace** for **collections** (monthly/annual contributions, payments, campaigns) and **welfare families**, plus **notices** aimed at welfare members.
- Data flows conceptually: **church identity and structure** support **welfare operations**; **welfare families and giving** can inform leadership and treasury **inside** the welfare's remit, while the main church remains the home for **whole-church** messaging and life.

Module-by-module overview

Shared = both surfaces use the same backend module. **Church-primary** / **Welfare-primary** = where the product intent and primary UI lean.

1. Authentication (auth)

Secure sign-in, sessions, and password flows for everyone using either app. **Shared**. One account can access the right areas according to role.

2. Users & roles (users , roles)

People on the system and permissions (e.g. admin vs member). **Shared**. User records underpin both church-wide and welfare workflows.

3. Regions & districts (regions , districts)

Geographic or organisational structure of the church. **Shared**. Reporting and data collection by area work for church planning and welfare context.

4. Families (families)

Households: members linked as families — the unit welfare uses for giving and eligibility. **Welfare-primary.** Treasury and leadership see family-level and member-level views.

5. Monthly contributions (monthly-contributions)

Periodic **monthly** welfare giving, tracked over time. **Welfare-primary** — core to collections inside the welfare umbrella.

6. Annual contributions (annual-contributions)

Annual welfare commitments or yearly patterns, per member/family. **Welfare-primary.** Supports annual stewardship, planning, and reports.

7. Payments (payments)

Recording and tracking **money movement** (incoming/outgoing) in line with contributions and welfare operations. **Welfare-primary.**

8. Campaigns (campaigns)

Targeted **collection drives** or giving campaigns. **Welfare-primary** for welfare-specific drives; usable wherever the church runs structured campaigns.

9. Notices (notices)

Welfare-focused communications for welfare participants. **Welfare-primary.**

10. Announcements (announcements)

Church-wide news and updates. **Church-primary.**

11. Sermons (sermons)

Sermon content for the **main church** worship life. **Church-primary.**

12. Events (events)

Church **calendar** — services, meetings, activities. **Church-primary.**

13. Settings & configuration (church admin)

Main church administration and configuration. **Church-primary.**

14. Messaging & engagement (planned: SMS)

Future SMS integration for reminders, alerts, notices. **Cross-cutting** — welfare reminders and wider church communication.

Summary paragraph

Church360 unites **main church operations** (structure, sermons, events, announcements, settings, broad user data) with a **welfare umbrella** inside the same church that focuses on **families and collections** — monthly and annual contributions, payments, campaigns, and welfare notices — all on **one backend** so identity and structure stay consistent while each ministry gets the right tools.

Quick reference: who uses what

Module	Main church	Welfare
Auth, users, roles, regions/districts	Yes	Yes
Families	Shared	Primary
Monthly & annual contributions	Supporting	Primary
Payments, campaigns	Supporting	Primary
Notices	—	Primary
Announcements, sermons, events, settings	Primary	—
SMS (planned)	Yes	Yes

Original welfare product pitch (congregation-facing)

Church360 Welfare is a digital platform for welfare ministries: member records, family registrations, contributions, and communications in one place.

- **Treasury:** Record and retrieve member and family information; family and individual contribution visibility (monthly and annual); reports; incoming and outgoing money in context of annual and family contributions.
- **Leadership:** Straightforward welfare data aligned with the **main church**; welfare membership feeds the broader church for benefits, programmes, and support.
- **Members:** Organised information; welfare communications; contribution tracking; planned SMS for more efficient, inclusive communication.

One sentence: Church360 Welfare connects welfare membership, giving, and communication in one system — so treasury can account with confidence, leadership can serve with clarity, and members stay informed and engaged.

End of scope details — draft for internal and stakeholder use.
